Even though I am pretty happy with Apple’s iPad, I still feel it can do so much more. For example, I would like it to have more memory, more ports, a faster processor and the ability to create fast prototypes. In short, the iPad would have to be an artist’s workstation, not just a creative tool. I wish there was a similar app for iOS, such as SketchBook, to allow the iPad Pro to do more. But yes, Adobe is working on that for the long term. However, until then, I suppose the best we can do is to look around and try to find the best apps out there. Adobe Photoshop Sketch is a perfect example of why artists and designers should give the iPad Pro real thoughtful consideration.

However, it doesn't lack essential tools that can make any photographer better - like the one that'll create custom presets for it. And the biggest problem with its predecessor was the lack of a web interface. HP's new ColorQ software measures the colors found in your graphics, photos, and Web pages, and also provides insight about the subtle color changes that happen when an image file is printed, viewed on a monitor, or viewed on a mobile device. With 70 billion colors and capabilities comparable with Adobe Photoshop, ColorQ makes it easy to find the right colors for your images.
